

Project Scout

Play Store Launch Checklist

What Scout needs to be worth \$9.99 | Updated June 12, 2026 | Version 3

Scout does not need to be perfect to ship. He needs to be reliable, honest, and feel like a companion. Everything on this list makes him worth \$9.99 to a family who has never met him before.

✓ Already Done — Scout Has These Today

- ✓ **Animated face** — Eyes that move and show emotion. Looks alive. Looks like Scout.
 - ✓ **Voice** — speaks and listens. Android STT + TTS, works offline.
 - ✓ **Camera awareness** — Scout sees faces and scenes.
 - ✓ **Offline brain** — TinyLlama 1.1B runs fully on the phone. No internet required.
 - ✓ **Flexible memory** — Scout learns and recalls any fact reliably. Fixed June 12.
 - ✓ **Identity answers** — Scout answers 'are you my friend?' as Scout, not a generic AI.
 - ✓ **Weather** — Current, tonight, tomorrow, 7-day, precipitation %. Offline with honest refusal.
 - ✓ **Total offline mode** — 'Go offline' blocks ALL internet features.
 - ✓ **Thinking expression** — Eyes drift, lids narrow, brows asymmetric while Scout thinks.
 - ✓ **Wake word filter** — Scout only responds when he hears his name. DONE June 12.
 - ✓ **Conversation window** — 30 seconds open conversation after Scout responds. DONE June 12.
 - ✓ **Boot window** — Scout ready immediately after boot, no name needed. DONE June 12.
 - ✓ **Online phrases** — 'connect to the internet' and variations. DONE June 12.
 - ✓ **Business model** — 7-day free trial, then \$9.99 one-time. No subscriptions. Ad-free forever.
 - ✓ **5-screen onboarding flow** — designed and approved. Blue color scheme locked in.
 - ✓ **Versioning system** — defined. Scout 1.0 The Beginning → 1.1 Growing Up → 2.0 A New Chapter.
-

■ Must Fix Before Launch

These are the real blockers. Scout cannot ship without these.

1 Face recognition ■ URGENT — makes Scout feel like a companion

- Scout currently describes objects not people. 'I see one person, a chair, sunglasses' instead of 'I can see you.'
 - Known face → 'I can see you.' Unknown face → 'Hello, I am Scout.' Dog → Nicolas Protocol.
 - ML Kit face detection, PeopleDb, and TruthDb already exist — just need connecting to the vision response.
- MainActivity.kt + PeopleDb.kt — one focused session

2 Remove hardcoded Gemini API key + Basic Settings screen ■ RELEASE BLOCKER

- Patrick's personal Gemini API key is in MainActivity.kt line 345. Must come out before launch.
 - Do together with Basic Settings screen — API key entry, offline toggle, robot name display.
 - ApiKeySetupActivity.kt wizard already built by Claude — needs wiring to secure storage.
- MainActivity.kt + ApiKeySetupActivity.kt + new SettingsActivity.kt — one focused session

3 Startup diagnostics Makes Scout start cleanly every time

- Scout checks at startup that brain is loaded, TTS is ready, STT is available.
 - If something is missing, Scout says something friendly rather than crashing.
- MainActivity.kt — startup check block

4 Onboarding flow First impression matters

- 5-screen flow designed and approved. Blue color scheme. Built by ChatGPT.
- Screen counter and progress dots must be driven by the same variable — never hardcoded in two places.
- 'What's to come' section also lives in Settings → About Scout → Features & Future Plans.

■ [New OnboardingActivity.kt](#) — one focused session

5 Fold 7 stability testing Confirms Scout works on flagship device

- All testing so far on A32 via WiFi. Fold 7 needs a dedicated session.
- Test voice, memory, offline brain, face recognition, weather, wake word on Fold 7.

■ [Dedicated test session on Fold 7](#) — no code, just validation

6 A32 stability testing Ongoing

- All June 12 work tested on A32 via WiFi. Wake word, memory, conversation window stable.

■ [Ongoing](#) — continue testing as new features are added

■ Legal & Website — Required for Launch

7 Privacy Policy Priority 1

- What data Scout collects. What stays on the device. Gemini is optional. Contact information.
- Google Play may require this depending on features — have it ready before submitting.

■ [Write once. Add to website footer + About Scout screen in app.](#)

8 Terms of Use Priority 2

- Scout is provided as-is. No guarantees. Not medical, legal, or financial advice.
- Keep it simple. One clear page is enough.

■ [Write once. Add to website footer + About Scout screen in app.](#)

9 Open Source Credits Priority 3

- llama.cpp, TinyLlama, Phi models, Android libraries — many licenses require attribution.
- A simple page with links and acknowledgements is enough for launch.

■ [Add to website + About Scout → Open Source Licenses in app.](#)

10 Website — lippy-robotics.gt.tc

- Add website link to: Google Play listing, Facebook page, About Scout screen.
- Add a 'What's New' or 'Scout Development Updates' page — shows Scout is actively growing.
- Future domain options: lippyrobotics.com, scoutcompanion.com, meetscout.ai

■ [Update website before launch. Add What's New page.](#)

■ Play Store Listing

Required to submit to Google Play.

- App description — Lead with 'Turn an old phone into a friend.' Honest about what Scout is.
- Screenshots — Scout's face, onboarding screens, weather response, memory recall, settings. 5–8 minimum.
- Privacy policy link — required by Google Play.
- Content rating questionnaire — Scout is family-safe. Straightforward.
- Short description — 60 characters max: 'A calm AI companion for your whole family. Private. Local. Yours.'

■ Post-Trial Strategy

- After 7 days — advanced features lock but Scout stays installed. Still greets the family.
- Trial end message — 'Thank you for spending time with Scout. Scout is still growing. You can unlock the full version at any time.'
- Roadmap in Settings → About Scout → Features & Future Plans.
- Welcome Back screen after every update — what changed, what was fixed, what was added.
- Scout optionally speaks after update: 'I've learned a few new things since my last update.'
- About Scout → Update History — shows every major version and improvements.

■ After Launch — Scout 1.1 Growing Up and Beyond

- Proposal Sandbox — 'Want me to remember that?' confirm step
- Permanent vs temporary memory — birthday vs appointment sorting
- Caring follow-up loop — 'How was your appointment?' then forget
- Full mood system — CALM / CURIOUS / HAPPY / THINKING / CONCERNED
- Spanish language support — Phase 1: STT + TTS + hardcoded translations
- Scout news feed — live news fetcher
- Response cleanup layer — post-TinyLlama filter
- Brain Pack upgrades — Phi-2, Llama 3.2, Phi-4, Llama 3.1 8B
- Robot renaming — user stores their own name for Scout
- Hardware mode — KEYESTUDIO Mini Tank Kit V2 via Bluetooth
- STT phonetic matching — 'Scout' misheard as 'Gal', 'Scott', 'Out'
- Cosmetic expression packs
- Full Settings screen
- Calendar integration

The bottom line

Scout already has a face, a voice, a brain, memory, weather, a wake word, an onboarding flow, and a real business model. The gap between today and the Play Store is focused sessions — not months.

Scout does not need to be finished to ship. He just needs to be Scout. And he already is.
